Integrate Siemens Xpedition EDM with Aras Innovator to streamline your electronic design & lifecycle management

The rapid evolution of electronic design and manufacturing requires more efficient ways to manage the complexity involved. Integrating EDM tools with PLM systems becomes invaluable in this context. Integrations facilitate a seamless flow of information across all stages of product development and enhance efficiency, collaboration and overall product quality.

Why integrate?

Enhanced collaboration & efficiency

With an integration, design teams can work more closely with manufacturing and supply chain departments. This allows for sharing design data, component specifications, and revisions, reducing communication gaps and accelerating decision-making processes. Engineers can access up-to-date component and design information directly in Xpedition EDM, minimizing the need for redundant data entry and manual updates.

Improved data accuracy & consistency

A key benefit of an integration is that any changes in Xpedition EDM are synchronized with the PLM system, maintaining data consistency across all stages of product development. This reduces the risk of errors caused by outdated or mismatched information, leading to higher design quality and more reliable products.

Optimized compliance & documentation

By centrally storing all design data, documentation and change histories, an integration simplifies compliance with industry standards and regulatory requirements. This facilitates audits and ensures that all required documents are up to date and accurate.

The solution

The integration of Xpedition EDM with Innovator using XPLM's proven **integrate2** platform is a strategic move that can transform electronics design and lifecycle management. By enhancing collaboration, improving data management, accelerating time-to-market, and ensuring compliance, this integration offers substantial benefits.

As technology continues to advance, the synergy between Xpedition EDM and Innovator will become increasingly important for companies looking to secure a competitive advantage in the industry.

EFFICIENCY	CONSISTENCY	COMPLIANCE
■ Always access up-to-date information ■ Perform agile, cross-domain development	■ Grant constantly high data quality ■ Minimize risk of errors	■ Retain compliance and standards ■ Ensure auditable processes

Integration features

integrate2 achieves complete traceability of your product development processes by integrating Xpedition EDM into your business processes managed by Innovator.

FEATURE	FUNCTIONALITY	YOUR BENEFITS
New design creation	Creates new designs based on templates directly in Xpedition EDM.	Save time by reusing existing designs or templates for new projects.
Design management	Uses Innovator objects to save the native design data.	Provide design information to all stakeholders outside the Xpedition EDM world.
Datamodel creation	Automatically creates objects and relationships for the data handling in Innovator.	Prevent manual work by automatically establishing the configured datamodel in Innovator.
Output data management	Uploads the outputs needed for production and for exchange with other disciplines from Xpedition EDM to Innovator.	Standardize and automate the exchange of manufacturing data and documentation.
BOM upload	Uploads the variant-specific list of components used in the design to Innovator.	Streamline your business processes by automatically uploading BOM information from Xpedition EDM to Innovator.
BOM comparison	Creates an interactive BOM comparison list between Xpedition EDM and Innovator.	Get exact information about components changed in the Xpedition EDM design versus Innovator and check for missing and obsolete parts in Innovator.
Optional: Design download	Downloads the design from Innovator for viewing or editing.	Download an existing EDX container from Innovator and import to Xpedition EDM as a new project.
Component data synchronization	Keeps the components in the library database bidirectionally up-to-date between Xpedition EDM and Innovator.	Eliminate the need for manual data entry and reduce the time and effort required to update information in both systems.

Connect smarter: Integrate Xpedition EDM with Innovator for a seamless product journey!

ABOUT US
XPLM is a global solution provider specializing in the integration of applications, processes, and data for industrial companies. With our unique portfolio, we connect leading PLM and engineering systems to help our customers bring products to market faster and more successfully.
