Integrate Siemens Capital with PTC Windchill PDMLink to streamline your electrical design & lifecycle management

The rapid evolution of electrical design and manufacturing requires more efficient ways to manage the complexity involved. Integrating ECAD tools with PLM systems becomes invaluable in this context. Integrations facilitate a seamless flow of information across all stages of product development and enhance efficiency, collaboration and overall product quality.

Why integrate?

Enhanced collaboration & efficiency

With an integration, design teams can work more closely with manufacturing and supply chain departments. This allows for real-time sharing of design data, component specifications, and revisions, reducing communication gaps and accelerating decision-making processes. Engineers can access up-to-date component and design information directly in Capital, minimizing the need for redundant data entry and manual updates.

Improved data accuracy & consistency

A key benefit of an integration is that any changes made in Capital are synchronized with the PLM system, maintaining data consistency across all stages of product development. This reduces the risk of errors caused by outdated or mismatched information, leading to higher design quality and more reliable products.

Optimized compliance & documentation

By centrally storing all design data, documentation and change histories, an integration simplifies compliance with industry standards and regulatory requirements. This facilitates audits and ensures that all required documents are up to date and accurate.

The solution

The integration of Capital with Windchill using XPLM's proven **integrate2** platform is a strategic move that can transform electrical design and lifecycle management. By enhancing collaboration, improving data management, accelerating time-to-market, and ensuring compliance, this integration offers substantial benefits.

As technology continues to advance, the synergy between Capital and Windchill will become increasingly important for companies looking to secure a competitive advantage in the industry.

EFFICIENCY	CONSISTENCY	COMPLIANCE
■ Always access up-to-date information ■ Perform agile, cross-domain development	■ Grant constantly high data quality ■ Minimize risk of errors	■ Retain compliance and standards ■ Ensure auditable processes

Integration features

integrate2 achieves complete traceability of your product development processes by integrating Capital into your business processes managed by Windchill.

FEATURE	FUNCTIONALITY	YOUR BENEFITS
Design management	Uses Windchill objects to manage the native design data.	Avoid redundancy by using a central storage location and provide design information to all stakeholders outside the Capital world.
Datamodel creation	Automatically creates objects and relationships for the data handling in Windchill.	Prevent manual work by automatically establishing the configured datamodel in Windchill.
Output data creation	Creates and uploads the outputs needed for production and for exchange with other disciplines.	Standardize and automate the creation of manufacturing data and documentation.
BOM upload	Uploads the assembly-specific list of components used in the design to Windchill.	Streamline your business processes by automatically uploading BOM information from Capital to Windchill.
BOM comparison	Creates an interactive BOM comparison list between Capital and Windchill.	Get exact information about components changed in the Capital design versus Windchill and check for missing and obsolete parts in Windchill.
Component data synchronization	Keeps the components in the library database bidirectionally up-to-date between Capital and Windchill.	Eliminate the need for manual data entry and reduce the time and effort required to update information in both systems.

Power-up your product lifecycle: Seamlessly connect Capital with Windchill!

ABOUT US
XPLM is a global solution provider specializing in the integration of applications, processes, and data for industrial companies. With our unique portfolio, we connect leading PLM and engineering systems to help our customers bring products to market faster and more successfully.

HEADQUARTER
